Dear Ma'am,

Subject: Proposal to Introduce a New Course on Data Science

Did you know that leading universities worldwide are equipping their students with data science skills to meet the growing industry demand?

As a student passionate about emerging technologies, I've noticed that our curriculum could greatly benefit from a dedicated course on data science. This field is revolutionizing industries by enabling data-driven decision-making. Incorporating such a course would not only enhance our institution's reputation but also provide students with competitive skills in the job market.

Implementing a data science course could position FAST NUCES as a pioneer in cutting-edge education in our region. It would attract prospective students interested in this field and offer current students valuable knowledge in statistics, machine learning, and big data analytics. Enclosed are testimonials from alumni who have pursued data science independently and have excelled in their careers.

I kindly request a meeting to discuss the possibility of introducing this course into our curriculum. Your support could significantly impact our students' future success. Could we schedule a meeting next week to explore this opportunity further?

Regards,

Muhammad Shafeen

Student
